3. Step-by-Step: Building Specialized Gems	Page 5
4. Customization Categories and Tonal Options	Page 6
5. Pro Tips, Metaprompting and Official Resources	Page 7

1. THE POWER OF PERSONALIZING YOUR AI

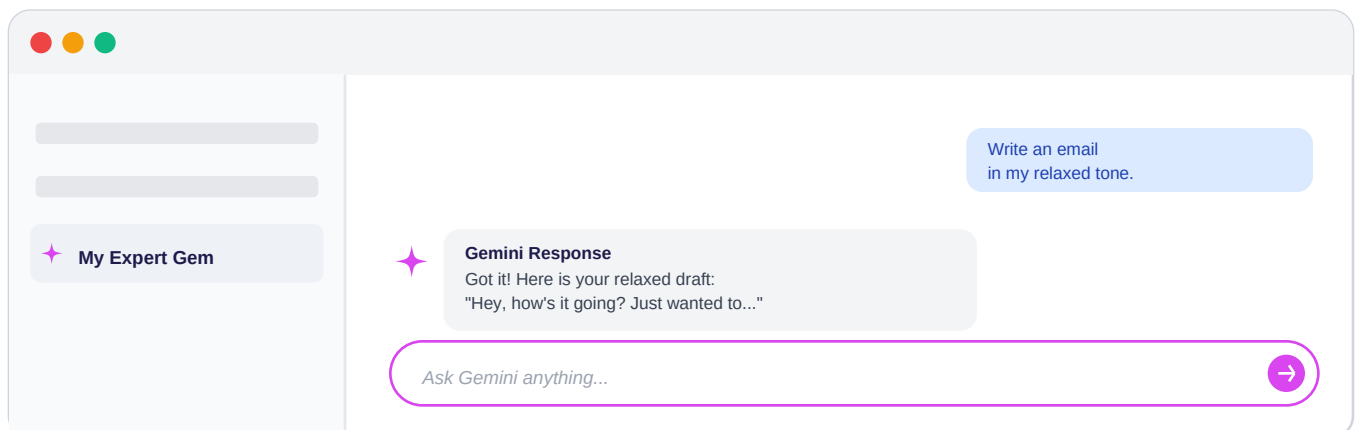

Are you tired of repeating yourself to Gemini over and over? Reminding it to use a professional tone, to keep responses concise, or to format the output with bullet points in every single chat? It's an unnecessary time tax.

AI personalization lets you set global ground rules. Think of it as briefing your assistant on your profile, tone, and preferences once, so it remembers them across all conversations. This is simple, doesn't require coding, and takes less than five minutes.

What is the difference between Instructions and Gems?

- **Custom Instructions:** These run quietly in the background of all your general chats. This is your global assistant default.
- **Custom Gems:** These are dedicated experts tailored for specific roles. They only activate when you click on them (like a specialized editor or developer).

Gemini Workspace Interface:

2. INSTRUCTIONS FOR GEMINI (GLOBAL)

Use this flow to configure your default assistant settings. Follow these steps:

Step 1. Go to the Gemini Web Portal

Open your preferred web browser and head to gemini.google.com. Make sure to log in with your personal account **[Note: Workspace or corporate accounts might have these customization features restricted by administrative policies]**.

Step 2. Expand the Sidebar Menu

Click the three horizontal lines ☰ located in the top-left corner of the screen **[This opens the drawer containing your chat history and platform settings]**.

Step 3. Open the Settings Panel

Scroll down in the menu and click **Settings** ☰ **[This is the control hub where you configure the model's global parameters]**.

Step 4. Access Personal Intelligence

Select the tab labeled **Personal Intelligence** and click on **Instructions for Gemini** **[This section safely manages how the model remembers and adapts to your style]**.

Step 5. Input Your Custom Guidelines

Click on **Add (+)** or **Edit**. Type your detailed rules on how you want Gemini to respond to you **[For instance: 'Always respond concisely and format headings using bullet points']**.

Step 6. Save and Apply

Click **Submit** or **Save**. Your brand new guidelines will automatically apply to all future chats **[Excellent! Your Gemini is now completely aligned with your personal style]**.

3. BUILDING SPECIALIZED GEMS

When you need dedicated experts for recurring tasks (like copywriting, coding, or translating), building a Custom Gem is the absolute best way. Follow these steps:

Step 1. Navigate to the Gems Tab

In the left sidebar menu , select the option labeled **Gems** [\[Gems operate as independent units and won't affect your daily casual chats\]](#).

Step 2. Create a New Gem

Click the **New Gem (+)** button to launch a clean setup canvas [\[This feature is available to Gemini Advanced and enterprise users\]](#).

Step 3. Choose a Name and Role

Give your Gem a concise and descriptive title (such as 'Coding Coach') and add a short purpose statement [\[A clear name makes it easier to navigate your collection from the sidebar\]](#).

Step 4. Write Specific Expert Instructions

Detail the custom behavioral rules and expectations. Gems support massive character limits compared to global settings [\[This is perfect for pasting elaborate design systems, brands sheets, or structured templates\]](#).

Step 5. Test and Edit in Real Time

Use the chat preview window on the right side of the screen to talk to your Gem and refine its responses [\[If the output feels a bit off, adjust your core prompt in the left panel instantly\]](#).

Step 6. Publish Your Specialized Gem

Click **Create** or **Save**. Your custom specialist is now ready and pinned to your sidebar for instant access [\[Congratulations! You have cloned a private expert tailored for your tasks\]](#).

4. CUSTOMIZATION CATEGORIES AND TONAL OPTIONS

To help you brainstorm how you want your Gemini to behave, here are the main customization categories and realistic examples of instructions you can adapt:

Category	Tone Options	Example Guideline
Tone and Voice	Formal, Casual/Relaxed, Concise, Creative, Academic	<i>'Speak to me in a very relaxed, casual, and friendly tone, like a coffee break chat.'</i>
Output Structure	Bullet lists, Short paragraphs, Data tables, Quick summaries	<i>'Always begin your replies with a quick, 3-bullet executive summary.'</i>
Language and Locale	Colombian Spanish, British English, Parallel translation	<i>'Always reply using common, friendly Colombian slang and phrasing.'</i>

Outstanding tones you can experiment with:

- **Formal Tone:** Best for business proposals or serious documents. Gemini will avoid humor, exclamation marks, and short forms.
- **Relaxed and Casual Tone:** Our personal favorite. Gemini addresses you directly and writes in a friendly, conversational style.
- **Ultra-Concise Tone:** Ideal if you hate reading long intros. Gemini gets straight to the point using short, high-impact lines.
- **Mentor or Tutor Tone:** Gemini guides you step-by-step, asks check-up questions, and keeps you motivated through the learning process.

5. PRO TIPS AND METAPROMPTING

What to do if your prompt is too long?

The text box for global custom instructions has a character cap. If you want highly detailed guidelines, **build a Custom Gem instead**. Gems support a much larger prompt capacity and allow you to upload background files as reference.

The Metaprompting Technique (AI training AI):

Don't struggle writing your custom rules from scratch. Have Gemini write them for you. Copy and paste this exact prompt into a regular chat window:

COPY AND PASTE THIS PROMPT IN GEMINI:

"I want to create the perfect custom instructions for my profile. My goal is to have you help me with [insert your task or profession]. Please ask me 5 key questions about my style preferences, tone, writing voice, and formats so that, using my answers, you can write the ultimate custom instructions prompt for me."

Official Google Support Resources:
